

KOLBY SAMSON | RESUME

Student at University of Washington-Bothell

Email: kosamson@uw.edu

Website: www.kosamson.github.io

GitHub: github.com/kosamson

Phone: XXX XXX XXXX

Education

University of Washington-Bothell - B.S. Computer Science & Software Engineering

Sep 2019 - Jun 2022

- 3.88 GPA
- Relevant Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems, Information Assurance & Cybersecurity

Skills

Programming Languages -

- Java, C++, Python

Tools & Technologies -

- Git, IntelliJ IDEA, Visual Studio Code, Visual Studio Community, Eclipse

Projects

Skill Bank - Skill Practice Tracker

Sep 2020 - Oct 2020

- Desktop Java Application allowing users to track accumulated skill practice hours
- Designed Java Swing GUI to allow users to intuitively view and manage their unique skill banks
- Integrated skill tracking with to-do list functionality to boost user productivity
- Implemented application unit testing using the JUnit testing framework

Raava Discord Bot - Server Logging Bot Application

August 2020

- Python Bot Application connected to servers on the Discord communications platform
- Leveraged the Discord API through the discord.py API Wrapper library
- Expanded upon Discord's "Audit Log" feature with additional logging events to support server administrators
- Implemented custom utility commands for server users and administrators to view logs and retrieve server information

Collectibles Store Simulator - Store Management Simulation

June 2020

- Command-Line C++ Application simulating a collectibles store
- Designed customer database, inventory system, and transaction management system using object-oriented design principles
- Integrated the Factory and Command design patterns to enable greater program extensibility
- Implemented simulation logic using data structures such as hash tables, binary trees and arrays

Image Segmentation Application - Seed-Based Image Segmentation

March 2020

- Desktop C++ Application allowing for segmentation of images into distinct color regions
- Leveraged custom image wrapper library to process input images
- Analyzed image pixels recursively to generate distinct color segments
- Implemented linked list data structures to keep track of connected groups of pixels
